Paul Kim
Software Developer

Summary

Aspiring front-end developer with a passion for web-development, and a desire to build the next great thing. I specialize in Javascript, React, and Redux, but enjoy learning about and working with other languages and frameworks. Prior experience in the military, has provided me a strong foundation in team-collaborative efforts and strategic problem solving.

Experience

US Army | Combat Medic   2013 - 2017

Daegu, Republic of Korea

- Collected patient medical information and details about current conditions.
- Conducted field exercises for procedural medical training.
- Performed lifesaving interventions in combat situations.
- Field Sanitation Training and Agricultural Inspections.

Projects

Weatherly   React

Weather Application using Fetch calls from weather database. Displays Current Weather information: highs/lows, location, and description

SwapiBox   React, React-Router

Star Wars Application built on React and React router utilizing Star Wars API. Displays cards showing character, vehicle, and planet data.

Stravant   React, Redux, Sockit.io

Fitness Application built on React and Redux that utilizes the strava API. Users can view their fitness activity from strava and track their pomodoros.
